Recap

Let (X, \mathfrak{M}) be a measurable space throughout.

Recap

Let (X, \mathfrak{M}) be a measurable space throughout.

So far:

Theorem 1 (Radon-Nikodym I [1, pp. 56-59]) Let $\mu, \nu: \mathfrak{M} \to [0, \infty]$ be two measures with μ σ -finite and $\nu \ll \mu$. Then there is a measurable $u: X \to [0, \infty]$ with

$$\nu(\cdot) = \int_{\cdot} u \, d\mu, \tag{1}$$

which is unique up to a set of μ -measure zero.

Recap

Let (X, \mathfrak{M}) be a measurable space throughout.

So far:

Theorem 1 (Radon-Nikodym I [1, pp. 56-59]) Let $\mu, \nu \colon \mathfrak{M} \to [0, \infty]$ be two measures with μ σ -finite and $\nu \ll \mu$. Then there is a measurable $u \colon X \to [0, \infty]$ with

$$\nu(\cdot) = \int_{\cdot} u \, d\mu, \tag{1}$$

which is unique up to a set of μ -measure zero.

Today: More decomposition theorems.

Recap II

Definition 2 ([1, p. 55])

Let $\mu, \nu \colon \mathfrak{M} \to [0, \infty]$ be two measures.

(i) ν is said to be *absolutely continuous* wrt. μ , $\nu \ll \mu$, if for any $E \in \mathfrak{M}$, $\mu(E) = 0 \rightarrow \nu(E) = 0$.

(ii) μ, ν are said to be *mutually singular*, $\nu \perp \mu$, if there are disjoint $X_{\mu}, X_{\nu} \in \mathfrak{M}$ with $X = X_{\mu} \cup X_{\nu}$ and $\mu(E) = \mu(E \cap X_{\mu})$, as well as $\nu(E) = \nu(E \cap X_{\nu})$ for any $E \in \mathfrak{M}$.

(iii) ν is said to be *diffuse* wrt. μ , if for any $E \in \mathfrak{M}$, $\mu(E) < \infty \rightarrow \nu(E) = 0$.

Recap II

Definition 2 ([1, p. 55])

Let $\mu, \nu \colon \mathfrak{M} \to [0, \infty]$ be two measures.

(i) ν is said to be *absolutely continuous* wrt. μ , $\nu \ll \mu$, if for any $E \in \mathfrak{M}$, $\mu(E) = 0 \rightarrow \nu(E) = 0$.

(ii) μ, ν are said to be *mutually singular*, $\nu \perp \mu$, if there are disjoint $X_{\mu}, X_{\nu} \in \mathfrak{M}$ with $X = X_{\mu} \cup X_{\nu}$ and $\mu(E) = \mu(E \cap X_{\mu})$, as well as $\nu(E) = \nu(E \cap X_{\nu})$ for any $E \in \mathfrak{M}$.

(iii) ν is said to be *diffuse* wrt. μ , if for any $E \in \mathfrak{M}$, $\mu(E) < \infty \rightarrow \nu(E) = 0$.

Definition 3 Let $\mu,\nu:\mathfrak{M}\to[0,\infty]$ be two measures. We define the following three set functions:

$$\nu_{ac}: \mathfrak{M} \to [0,\infty], E \mapsto \max\left\{ \int_{E} u \, d\mu \, \middle| \, u: X \to [0,\infty] \text{ measurable} \land \int_{E'} u \, d\mu \leq \nu(E') \, \forall \, \mathfrak{M} \ni E' \subseteq E \right\}$$

$$\nu_{s}: \mathfrak{M} \to [0,\infty], E \mapsto \max\{\nu(E') \mid \mathfrak{M} \ni E' \subseteq E, \mu(E') = 0\}$$

$$\nu_{d}: \mathfrak{M} \to [0,\infty], E \mapsto \max\{\nu(E') \mid \mathfrak{M} \ni E' \subseteq E, \mu(E'') = \infty \, \forall \, \mathfrak{M} \in E'' \subseteq E', \nu(E'') > 0 \}$$

Auxiliary Functions II

Lemma 4 The following statements hold.

(i) ν_{ac}, ν_s and ν_d are well-defined and measures.
 (ii) ν_{ac} ≪ μ.

(iii) If ν_s is σ -finite, then there exists some $X_s \in \mathfrak{M}$, s.t.

$$\mu(X_s) = 0 = \nu_d(X_s) \text{ and } \nu_s(E) = \nu(E \cap X_s) \tag{5}$$

for all $E \in \mathfrak{M}$. Also, $\nu_s \perp \mu$ and $\nu_s \perp \nu_d$. (iv) ν_d is diffuse wrt. μ .

Auxiliary Functions II

Lemma 4 The following statements hold.

(i) ν_{ac}, ν_s and ν_d are well-defined and measures.
 (ii) ν_{ac} ≪ μ.

(iii) If ν_s is σ -finite, then there exists some $X_s \in \mathfrak{M}$, s.t.

$$\mu(X_s) = 0 = \nu_d(X_s) \text{ and } \nu_s(E) = \nu(E \cap X_s) \tag{5}$$

for all $E \in \mathfrak{M}$. Also, $\nu_s \perp \mu$ and $\nu_s \perp \nu_d$. (iv) ν_d is diffuse wrt. μ .

Lemma 5 ([1, pp. 13-14]) Let $\mu: \mathfrak{M} \to [0, \infty]$ be a measure, $\mathfrak{N} \subseteq \mathfrak{M}$ be closed under finite unions and $\emptyset \in \mathfrak{N}$. Then

$$\nu \colon \mathfrak{M} \to [0,\infty], E \mapsto \max\{\mu(E \cap F) \mid F \in \mathfrak{N}\}$$
(6)

is well-defined and a measure.

Lebesgue Decomposition

Theorem 6 (Lebesgue Decomposition Theorem) Let $\mu, \nu \colon \mathfrak{M} \to [0, \infty]$ be two measures and μ σ -finite. (i) Then

$$\nu = \nu_{ac} + \nu_s. \tag{7}$$

(ii) If ν is σ -finite, then $\nu_s \perp \mu$ and the decomposition is unique.

Lebesgue Decomposition

Theorem 6 (Lebesgue Decomposition Theorem) Let $\mu, \nu \colon \mathfrak{M} \to [0, \infty]$ be two measures and μ σ -finite. (i) Then

$$\nu = \nu_{ac} + \nu_s. \tag{7}$$

- コント 4 日 > ト 4 日 > ト 4 日 > - シックク

(ii) If ν is σ -finite, then $\nu_s \perp \mu$ and the decomposition is unique.

Lemma 7 ([1, p. 56, 64]) Let $\mu, \nu \colon \mathfrak{M} \to [0, \infty]$ be measures with μ σ -finite and $\nu \ll \mu$. Then $\nu = \nu_{ac}$.

De Giorgis Theorem

 \sim Lebesgue for non- σ -finite μ .

De Giorgis Theorem

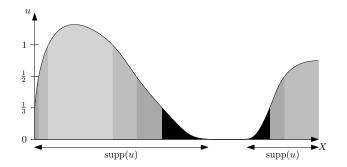

∼ Lebesgue for non- σ -finite μ . Theorem 8 (De Giorgis Theorem) Let $\mu, \nu: \mathfrak{M} \rightarrow [0, \infty]$ be two measures. Then

$$\nu = \nu_{ac} + \nu_s + \nu_d. \tag{8}$$

Signed Measures

Definition 9 A function $\lambda: \mathfrak{M} \to [-\infty, \infty]$ is called a *signed measure*, if: (i) $\lambda(\emptyset) = 0$ (ii) $|\{-\infty, \infty\} \cap \operatorname{im}(\lambda)| \leq 1$ (iii) For any mutually disjoint family $\{E_n \subseteq \mathfrak{M}\}_{n \in \mathbb{N}_{\geq 1}}$, we have $\lambda(\bigcup_{n=1}^{\infty} E_n) = \sum_{n=1}^{\infty} \lambda(E_n)$.

Signed Measures

Definition 9 A function $\lambda: \mathfrak{M} \to [-\infty, \infty]$ is called a *signed measure*, if: (i) $\lambda(\emptyset) = 0$ (ii) $|\{-\infty, \infty\} \cap \operatorname{im}(\lambda)| \le 1$ (iii) For any mutually disjoint family $\{E_n \subseteq \mathfrak{M}\}_{n \in \mathbb{N}_{\ge 1}}$, we have $\lambda(\bigcup_{n=1}^{\infty} E_n) = \sum_{n=1}^{\infty} \lambda(E_n).$

Lemma 10

A set function $\lambda \colon \mathfrak{M} \to [-\infty,\infty]$ is a signed measure, iff it satisfies the following:

(i) $|\{-\infty,\infty\} \cap im(\lambda)| \leq 1$

(ii) $\lambda(E \cup F) = \lambda(E) + \lambda(F)$ for disjoint $E, F \in \mathfrak{M}$.

(iii) For any increasing sequence $\{E_n \subseteq \mathfrak{M}\}_{n \in \mathbb{N}_{\geq 1}}$, we have $\lambda(\bigcup_{n=1}^{\infty} E_n) = \lim_{n \to \infty} \lambda(E_n)$.

Positive Sets

Definition 11 A set $E \in \mathfrak{M}$ is called *positive*, if $\lambda(F) \ge 0$, and resp. *negative*, if $\lambda(F) \le 0$, for all $\mathfrak{M} \ni F \subseteq E$.

Positive Sets

Definition 11 A set $E \in \mathfrak{M}$ is called *positive*, if $\lambda(F) \ge 0$, and resp. *negative*, if $\lambda(F) \le 0$, for all $\mathfrak{M} \ni F \subseteq E$.

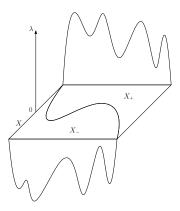

Lemma 12 Let $E \in \mathfrak{M}$ with $\lambda(E) \in (0, \infty)$. Then there exists a positive $\mathfrak{M} \ni F \subseteq E$.

Hahn Decomposition

Theorem 13 (Hahn Decomposition Theorem) Any measurable space (X, \mathfrak{M}) can be decomposed as $X = X^+ \cup X^-$, where $X^+ \subseteq X$ is positive and $X^- \subseteq X$ is negative.

Hahn Decomposition

Theorem 13 (Hahn Decomposition Theorem) Any measurable space (X, \mathfrak{M}) can be decomposed as $X = X^+ \cup X^-$, where $X^+ \subseteq X$ is positive and $X^- \subseteq X$ is negative.

Jordan Decomposition

Theorem 14 (Jordan Decomposition Theorem) There exists a unique pair (λ^+, λ^-) of measures with $\lambda^+ \perp \lambda^-$, one being finite and $\lambda = \lambda^+ - \lambda^-$.

Jordan Decomposition

Theorem 14 (Jordan Decomposition Theorem)

There exists a unique pair (λ^+, λ^-) of measures with $\lambda^+ \perp \lambda^-$, one being finite and $\lambda = \lambda^+ - \lambda^-$.

 \rightsquigarrow Lebesgue integral definition.

Signed Lebesgue Decomposition

"Culmination Theorem".

Theorem 15 (Signed Lebesgue Decomposition Theorem) Let $\lambda: \mathfrak{M} \to [-\infty, \infty]$ be a signed measure and $\mu: \mathfrak{M} \to [0, \infty]$ be a σ -finite measure.

(i) There are signed measures $\lambda_{ac}, \lambda_s \colon X \to [-\infty, \infty]$ and a measurable function $u \colon X \to [-\infty, \infty]$ with

$$\lambda = \lambda_{ac} + \lambda_s,\tag{9}$$

 $\lambda_{\sf ac} \ll \mu$ and

$$\lambda_{ac}(\cdot) = \int_{\cdot} u \, d\mu. \tag{10}$$

(ii) If λ is σ -finite, then $\lambda_s \perp \mu$ and the decomposition is unique.

くちゃく 聞き ふぼき ふぼう ふりゃく

Summary

Decomposition	Summary
Hewitt-Yosida [1, pp. 8-9]	$\mu = \mu_p + \mu_c$
Atomic [1, pp. 13-16]	$\mu = \mu_1 + \mu_2$
Lebesgue	$ u = u_{ac} + u_s$
De Giorgi	$\nu = \nu_{ac} + \nu_s + \nu_d$
Hahn	$X = X^+ \cup X^-$
Jordan	$\lambda = \lambda^+ - \lambda^-$
Signed Lebesgue	$\lambda = \lambda_{\textit{ac}} + \lambda_{\textit{s}}$
